HOLCUS LANATUS L.i Holcus kmatius (velvet grass), like many other aggressive species, has many warm friends, and it has bitter enemies. It is widely introduced throughout the United States as far south as the Carolinas. While commonly considered to produce a feed of low grade, many ranchers in the Pacific Northwest, the only place in which it is abundant, find it a very valuable grass. It inhabits moist meadows and furnishes both hay and pasturage of medium quality. No. 8891 was collected near Hood River Oreg., August 23, 1907. The sample was mature, one-half of the culm dry, but the leaves were all green. It was cut 3 inches high. 1More recently written Notholcus lunatus (L.) Nash.! Canada Central Experiment Farm Bui. 19, p. 28; Kentucky Report, 1902, p. 302; Louisiana Bui....
