Excerpt from On the Piano Movers Problem: Various Decomposable Two-Dimensional Motion Planning Problems Abstract: Various special motion planning problems involving arbitrarily many degrees of freedom are shown to admit relatively simple solutions by techniques based on the connectivity graph approach described by Schwartz and Sharir. The solutions exploit the particularly simple configuration space structure of the robot systems considered. A typical problem is that of planning motions for a 2-D robot system consisting of several arms all jointed at one common endpoint and free to rotate past each other. The algorithm given for solving this problem runs in time  $O(nk^4)$  where  $k$  is the number of arms. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
