

Exploring a Bioinformatics Clustering Algorithm - Methodology, Experiments, Analysis

Filesize: 3.67 MB

Reviews

The very best ebook i ever study. It really is rally fascinating throug reading through period of time. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Coleman Kreiger)

EXPLORING A BIOINFORMATICS CLUSTERING ALGORITHM - METHODOLOGY, EXPERIMENTS, ANALYSIS

[DOWNLOAD](#)

VDM Verlag. Paperback. Condition: New. 172 pages. Dimensions: 8.9in. x 6.0in. x 0.5in. Microarray gene expression data are produced around the world in huge amounts. This data is not easy to analyse manually. Therefore, there is a need for automated techniques to do the job. Clustering is one of the automated techniques that can be handed to a computer to cluster the data to groups depending on properties that this data share. An important source of information for such automated techniques is the data about genes in large shared text databases such as Swiss-Prot. This book explores and evaluates MAXCLUS, a bioinformatics clustering algorithm, which clusters genes from microarray experimental data. MAXCLUS does the clustering of genes depending on the textual data that describe the genes. It attempts to create clusters of which it selects only the statistically significant ones by running a significance test. It then attempts to generalise these clusters by using a simple greedy generalisation algorithm. We explore the behaviour of MAXCLUS by running several clustering experiments that investigate various modifications to MAXCLUS and its data. This book should be useful to researchers and every one interested in clustering of microarray gene expression data. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
